

Himanshu Dhandole

Blockchain Developer

Nagpur-MH, India | +91 9284961467 | dhandolehimanshu@gmail.com | [LinkedIn](#) | [GitHub](#)

Blockchain developer specializing in DeFi protocol design, smart contract security, and gas optimization. Built and tested perpetual trading protocols, AI-based yield aggregators using Solidity and Foundry. Experienced in fuzz testing, invariant testing, and Cyfrin audit methodology, with 3x national hackathon wins and participation in ETHGlobal events.

SKILLS

- **Blockchain**: Solidity, Foundry, Scaffold-ETH, OpenZeppelin, Wagmi/Viem, IPFS, Hyperledger
- **Standards**: ERC-20/721/1155/4626/2981, EIP-712/5192, ERC-1967, ERC-4337, vAMM
- **Security**: Fuzz testing, Invariant testing, Gas optimisation, Cyfrin audit methodology
- **Frontend**: Next.js, React, TypeScript, Tailwind CSS
- **Backend**: Java, Spring Boot, Spring Security, Node.js, RESTful APIs, JWT
- **Data & Infra**: PostgreSQL, MongoDB, Redis, Docker, RabbitMQ, CI/CD, Maven

EXPERIENCE

Blockchain Intern | Cyberthon Pvt. Ltd

Jan - Apr 2026

- Designed and deployed production Solidity smart contracts including fuzz and invariant tests suite (using Foundry)
- Conducted security audits that resolved re-entrancy vulnerabilities and achieved approximately 18% gas reduction via memory-slot optimization.

Freelance Developer | Self-Employed

2024 - Present

- Built GST-compliant CRM and inventory management systems featuring billing and customer management.
- Delivered 3 full-stack production applications for clients using React, Spring Boot, and PostgreSQL.

PROJECTS

AURA-FARM | [GitHub](#) | [Live-Link](#)

Ian 2026

Personalized yield aggregation with soulbound risk profiles tailored to individual risk tolerance

- Designed modular **ERC-4626** vault architecture on **Circle's Arc testnet** with three risk tiers (Conservative, Balanced, Aggressive), enabling automated cross-chain USDC deposits via **Circle Gateway**.
- Developed **soulbound Risk NFT** system (**EIP-5192**) encoding user-specific allocation percentages on-chain, automatically routing deposits across vaults based on personalized risk profiles.
- Engineered **EIP-712 cryptographic verification** with **Nitrolite (Yellow) protocol** for gas-efficient off-chain rebalancing, reducing gas costs by 90%.
- Built **AI engine** with strategy generation, health monitoring, EIP-712 verification, and market-panic detection for automated risk-adjusted optimization and emergency rebalancing.

PERP-EX | [GitHub](#) | [Live-Link](#)

Jul 2026

On-chain perpetual futures protocol with NFT-based transferable positions and autonomous settlement infrastructure.

- Architected **vAMM** core for **decentralized Perpetual trading** with dynamic pricing and efficient leverage.
- Built **NFT position** tokens that unlock new use cases: traders can now **transfer leveraged positions**, use them in other protocols, or exit without closing trades.
- Built **autonomous liquidation system** with real-time liquidations and stop loss monitoring and **gas-optimized** keeper infrastructure.
- Built an **off-chain blockchain indexer** and **funding rate updater**, automating funding cycles every 8 hours and synchronizing all trading and liquidation events for analytics and transparency.

ACHIEVEMENTS

- Led and won 1st place in **3 national-level hackathons** (500+ participants each) and advanced to **finals in 2** additional competitions, and competed in 10+ hackathons.
- Ranked in the **top 5% nationally** and earned **Elite+Silver** in **NPTEL (IIT Kharagpur)** Blockchain and Its Applications.
- Awarded **Elite+Silver** in **NPTEL (IIT Kharagpur)** for Fundamentals of Artificial Intelligence.
- Represented at **ETHGlobal Delhi** and **ETHGlobal HackMoney**, building Web3 projects alongside global developers.

EDUCATION

JD College of Engineering & Management

B.Tech in Computer Science & Engineering

2022 - Present

CGPA: 9.28/10
